

Rent a Rink!

Get your skates on!

Synthetic ice rinks are used where frozen ice surfaces are impractical due to high temperatures (such as our hot South African climate!). This makes natural ice impossible or exorbitantly expensive. Our mobile synthetic ice rink aims to bring the ice skating experience to South African's at a fraction of the cost.

The standard rink size is 10m x 4m.

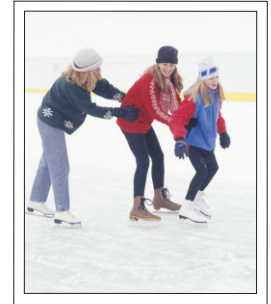

We don't need to wait for any water to freeze, so just a few hours after our installation team arrives, we are ready for your guests to get their skates on and get skating. We can use the ice skating rinks in any weather so there is no risk of the ice melting.

Cost: R5,000 for first 3 hours (Additional hours: R 500 per hour)

Price Includes: Setup & Breakdown (within Joburg), Steel railing and 20 Ice skates (various sizes ranging from size 1 - 12)

Why not also look at adding in a snow machine, icicle lights, a low fogger machine and some fun decor to really complete the effect?

Due to the physical nature of this activity, all bookings are at your own risk and you will be required to sign an indemnity form and display a sign advising your guests that they do this at their own risk

Any occasion we touch turns to gold
